

EXPLANATION OF PLATES

Pl. VIIa. Looking south-west across the Howe of Fife to the Lomond Hills.

Pl. VIIb. Section formerly seen in Ladybank Sandpit, showing horizontal bedding of sand and gravel.

Pl. VIIIa. Pitlessie Drainage Channel: looking eastwards down that part of the channel presumed to have been cut by flowing water marginal to ice occupying the Howe to the north.

Pl. VIIIb. Mouth of the Walton Hill Drainage Channel: as seen from the main Falkland-Cupar road. The channel is cut in boulder-clay-covered slopes and opens on to the sandy plain of the Howe at the 190-foot feature which is seen to the left of the channel.

CORRIGENDUM (vol. 18, part 3)

p. 233 *The last sentence on this page should read:*

The pyroxene is monoclinic with the optic axial plane parallel to (010) with $Z:\gamma = 41^\circ$, and with $2V(\pm) = 48^\circ$, and shows both simple and repeated twinning with \{100\} as twin-plane.
